

EMERGENCY ROADSIDE ASSISTANCE

Less downtime. Lower total costs.

Drivers like TTN because we keep them informed and get them back on the road, fast. Breakdown and maintenance managers like us for the very same reasons.

What Matters to Your Drivers Matters to Us.

We manage breakdown events to ensure the right providers are assigned, services are being performed as requested, and no more time, labor or materials are used than necessary. We also ensure accuracy by auditing every invoice we manage.

We minimize downtime with modern technology. We maximize uptime with greater compliance. We lower maintenance costs with smart workflow and cost-reduction data. Our customers benefit from greater flexibility, transparency, and on-time performance.

The secret to our success is the strength of our network. We can reach most breakdowns, anywhere in the U.S., within approximately 45 minutes, often less.

We lower costs by eliminating phone calls and immediately connecting with service providers with whom we've already negotiated the industry's lowest rates. Typically, we have our clients' vehicles back on the road within less than two hours.

Maintenance managers at most of the industry's 100 largest "for hire" and "private" transportation fleets supplement their staff or maintenance processes with services from TTN. What we do for them, we can customize for you. You'll benefit from higher performance and better results.

Achieve competitive advantage with emergency roadside services from TTN Fleet Solutions.
